

wind facility construction, o&m and training

Energy Maintenance Service is one of North America's leading wind turbine operations and maintenance companies. Our turbine repair offerings are the most comprehensive on the continent, and we also provide engineering services, construction, certification training for nearly all aspects of turbine maintenance and major component refurbishing.

Reliable With Every Turn™

EMS runs the gamut for wind energy development and generation.

We meet the needs of customers with high-quality, cost-effective services and proximity to facilities and projects across North America. Our headquarters are in Gary, S.D., we have offices in California

and Oregon and maintain a service presence in 10 additional states.

EMS is an established, full-service partner to turbine and component manufacturers; wind farm developers, owners, and operators; industry consulting firms; and others in related business sectors. We customize solutions to address specific needs with

advanced systems, a team of proven experts and intimate knowledge of the industry. We do it with a decentralized and highly mobile operation and an experienced labor force that provides fast, responsive service every time.

Regardless of environmental conditions, operating circumstances or project locations, we make sure our customers get peak performance.

Let us make your equipment and machines reliable with every turn. Contact EMS today.
